Through a combination of classroom presentations and tours of the treatment facilities, a wide variety of topics will be covered, including the reasons why waste must be treated, the roles and responsibilities of a treatment plant operator, the use of safe practices and procedures, and the equipment and processes used in wastewater facilities. Participants will learn how to operate and maintain racks, screens, comminutors, sedimentation tanks, trickling filters, rotating biological contactors, package activated sludge plants, oxidation ditches, ponds, and chlorination facilities. Other subjects to be covered include how to analyze and solve operational problems and how to perform mathematical calculations relating to wastewater treatment process control.
